## MODEL NUMBER DESCRIPTION

## PACKING & DESCRIPTION

- 1. Inner packing : packing the vinyl pack unit at 500 pcs, and then packing inner paper box unit at 3 vinyl packs(1500 pcs)
- 2. Description on the paper box ① Model ②Lot No. ③ Quantity

## SOLDER CONDITIONS

- 1. Preliminary heating to be at 150°C max. for 120sec max.
- 2. Soldering heat to be at 260°C max for 3sec.

## PRECAUTION FOR USE

- 1. Avoid bending the Lead by constraint.
- 2. Do not soldering in condition with force to stress on the Lead.
- 3. Soldering flux does not contain chlorine elements against rust, and consider whether it need to be cleaning.
- 4. Avoid cleaning with the whole LED Lamp.
- 5. Use the methyl alcohol for cleaning the part of Flux soldering
  - Temperature : below 45 °C
  - Cleaning time : within 30 sec.
- 6. Use it within 1 week after the pack was opened.
- 7. Storage Instructions
  - 7-1. It is recommend to store the products in dried spot and avoid the low-temperature or high-temperature.
  - 7-2. It is recommend to avoid the spots with gas or winds affected with rust on Lead.
  - 7-3. It is recommend to avoid the direct rays of the sun.
  - 7-4. It is recommend to do not press or enforce to change quality and variation on products.
- 8. Static Electricity
  - 8-1. The LEDs static electricity and surge voltage damage. So it is recommended that a wrist band or anti-electro-static glove be used when handing the LEDs.
  - 8-2. All devices, equipment and machinery must be properly grounded. It is recommended that measures be taken against surge voltage to the equipment that mounts the LEDs.
  - 8-3. When inspecting the final products in which LEDs were assembled, it is recommended to check whether the assembled LEDs are damaged by static electricity or not. It is easy to find static-damaged LEDs by a light-on test or a VF test at a lower current.
